FLORIDA
Employment Trends

Department of Labor and Employment Security
Bureau of Labor Market Information

Highlights:

- Nonagricultural employment in Florida grew by 4.7 percent or 231,600 new jobs over the year to reach 5,117,100 in August. The pace of Florida's job growth remains as the fastest of the populous states, despite Flroida's slower gains over the last seven months.
- Services, which has overtaken trade as Florida's largest industry, continued to be the fastest growing sector (+6.9 percent) and the sector gaining the highest number of new jobs (+91,500). Most of these gains were from the subsectors of business services and health services.
- Contruction employment has dropped by 4,000 since its peak employment month of January 1988, responding to tax reform, interest rates, and overbuilding around the state.
- Florida's unemployment rate in August stood at 4.9 percent representing 300,000 jobless Floridians. This compared favorably to the national unemployment rate of 5.6 percent. Florida has registered an unemployment rate below that of the nation since October 1981.

FLORIDA'S NONAGRICULTURAL EMPLOYMENT
SEASONALLY ADJUSTED, AUGUST 1987–AUGUST 1988

(1) - These series do not have a consistent seasonal pattern and consequently do not pass criteria for seasonal adjustment. Total nonagricultural employment is the sum of all major industries and is not adjusted. Durables and nondurables in manufacturing and wholesale and retail in trade may not add to total due to lack of adjustment to durables and wholesale.

Employment Trends

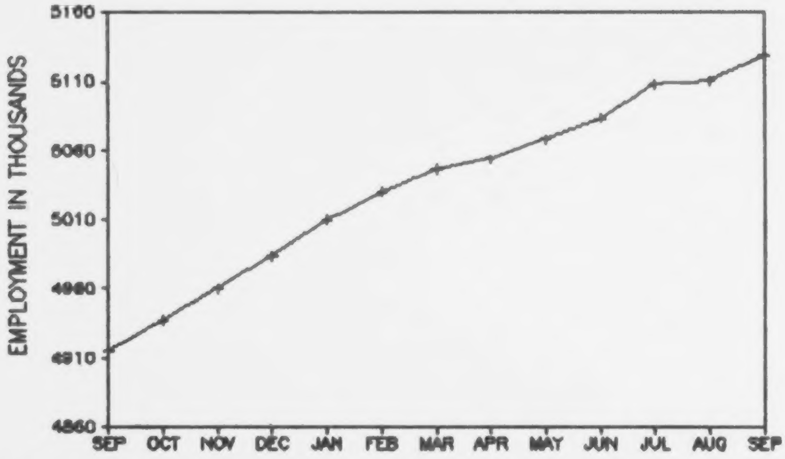
Department of Labor and Employment Security
Bureau of Labor Market Information

Highlights:

- Nonagricultural employment in Florida grew by 4.4 percent or 214,000 new jobs over the year to reach 5,128,600 in September. Although this is a slower growth rate than those recorded earlier in 1988, it still remains as the fastest rate compared to the nation's most populous states.
- Services employment total (1,412,600) surpassed that of trade (1,404,100) again in September and remained as Florida's largest sector. It also was growing at the fastest pace of Florida's industries with 6 out of every 10 new jobs being in the subsectors of health or business services.
- Construction employment in September recovered the jobs lost previously this year, but was basically flat compared to the January 1988 level.
- Unemployment in Florida stood at 4.9 percent in September representing 301,000 jobless Floridians. It was the fourth consecutive month with an unemployment rate below 5.0 percent. Florida's rate was 0.5 percentage point below the national unemployment rate of 5.4 percent in September.
- U.S. vs Florida average annual pay by industry is included in this issue.

FLORIDA'S NONAGRICULTURAL EMPLOYMENT

SEASONALLY ADJUSTED, SEPTEMBER 1987-SEPTEMBER 1988



Source: Florida Department of Labor and Employment Security, Bureau of Labor Market Information, Current Employment Statistics Program, in cooperation with the U.S. Department of Labor, Bureau of Labor Statistics.

Release Date: September 1988
Data Month: November 1988

Letter No. 469

JOB GROWTH SLOWING: Total nonagricultural employment (seasonally adjusted) rose by 4.4 percent or 214,000 new jobs over the year to reach 5,128,600 in September. Job growth in Florida although still healthy on a relative basis has been growing at slower pace throughout all of 1988. During the last twelve months, December 1987 was the peak growth month with slightly slower job growth since that time. In December Florida was growing at an annual basis of just under 300,000 new jobs where as now Florida is growing at just over 200,000 new jobs per year.

Those industries in Florida growing faster than the statewide average in September were services (6.3 percent), trade (5.1 percent), and government (4.5 percent)--all within the services-producing subsector. Those industries growing at a pace slower than that of the state were construction (3.1 percent); finance, insurance, and real estate (1.7 percent); transportation, communications, and public utilities (1.6 percent); manufacturing (1.4 percent); and mining (1.1 percent). All industry divisions in Florida recorded positive job growth over the year.

STRONG GROWTH INDUSTRIES: Services was Florida's largest industrial sector with 1,412,800 jobs in September. It surpassed trade during the last three months of June, July, and August. Services was also the fastest growing sector (6.3 percent) and the sector gaining the highest number of new jobs (83,900). Health services and business services together accounted for almost 60.0 percent of the new jobs.

Trade was Florida's second largest industry with an employment level of 1,404,100 in September. Trade and services together accounted for just over 50.0 percent of total nonagricultural employment in Florida. Trade also was the second fastest growing sector (5.1 percent) and the sector gaining the second highest number of new jobs over the year (68,200). The subsector contributing the most to the annual job growth was eating and drinking places--just under 30.0 percent of total.

Government was Florida's third fastest growing sector at 4.5 percent or 33,300 new jobs over the year. Almost 65.0 percent of the employment growth was centered in local government education responding to population gains.

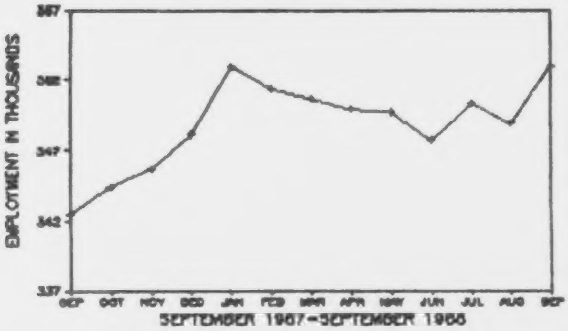
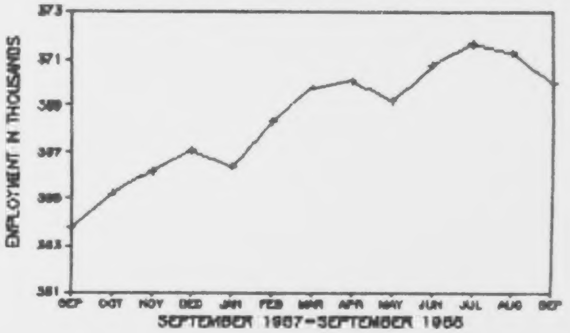
SLOWER GROWTH INDUSTRIES: Construction employment increased by 3.1 percent or 10,600 new jobs over the year. This industry exhibited considerable weakness earlier in 1988--actually losing jobs for 6 months during the year. These jobs were regained in September reaching a peak employment level (353,100) for the last 12 months. Slower growth was expected in construction due to higher interest rates, federal tax reform, and overbuilding in parts of the state.

NONAGRICULTURAL EMPLOYMENT
CONSTRUCTION, SEASONALLY ADJUSTED



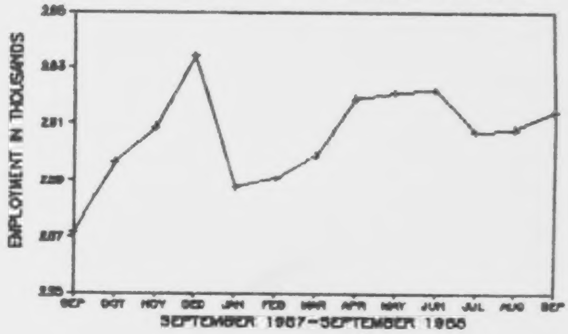
Finance, insurance, and real estate grew by 1.7 percent or 6,200 new jobs over the year. This sector used to be one of Florida's fastest growing but is currently responding to deregulation, mergers, and acquisitions. Weakness has been primarily in the subsectors of banking and credit agencies.

NONAGRICULTURAL EMPLOYMENT
FINANCE, INSURANCE, AND REAL ESTATE, SEASONALLY ADJUSTED



Transportation, communications, and public utilities employment grew by 1.6 percent or 4,200 new jobs over the year. This industry has experienced actual job losses over the year in the subsectors of air, water, and railroad transportation; and communications. Conversely, most of the job growth has been in the subsectors of trucking/warehousing and local passenger transit.

NONAGRICULTURAL EMPLOYMENT
TRANS., COMM., & PUB. UTIL., SEASONALLY ADJUSTED



Manufacturing employment increased over the year by 1.4 percent or 7,500 new jobs in September. July 1988 was the peak employment month this year reflecting a loss of 2,700 jobs over the last 2 months. Manufacturing employment in Florida responds to national and international economic conditions and federal funding levels for defense/aerospace contracts. Most of the growth has been in the subsectors of printing and publishing; machinery; and electrical/electronic equipment.

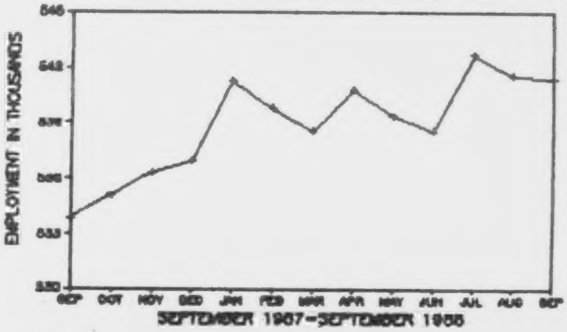
MANUFACTURING, SEASONALLY ADJUSTED



Source: Florida Department of Labor and Employment Security, Bureau of Labor Market Information, Current Employment Statistics Program, in cooperation with the U.S. Department of Labor, Bureau of Labor Statistics.

FLORIDA AND THE OTHER STATES: Florida continued to out-distance the nation's eleven most populous states in terms of its job growth rate over the year. Florida's nonagricultural jobs grew by 4.3 percent over the year (not seasonally adjusted) which was the fastest job growth rate recorded for the eleven states. Both California and Illinois tied for the second fastest growth rates at 3.4 percent with Michigan gaining new jobs at the slowest pace of 0.8 percent over the year.

When all the states in the nation were compared, two smaller states recorded faster job growth rates than that recorded by Florida. They were Nevada (5.9 percent) and Washington (4.4 percent). Those states in the nation gaining the highest number of new jobs over the year were California (398,700), Florida (211,400), Illinois (187,900), New York (141,400), Pennsylvania (113,00), and Virginia (115,900).

UNEMPLOYMENT BELOW 5.0 PERCENT FOURTH CONSECUTIVE MONTH: Florida's seasonally adjusted unemployment rate was 4.9 percent representing 301,000 jobless Floridians in September. The unemployment rate has remained basically unchanged over the month and year. Florida's unemployment rate has continued to be below the national unemployment rate since 1981, although the gap has narrowed over the last couple of months.

NATIONAL AND STATES' UNEMPLOYMENT RATES: The national civilian unemployment rate edged down in September to 5.4 percent (seasonally adjusted). The proportion of the working-age population with jobs was at a record 62.4 percent. The number of discouraged workers was 930,000 in the third quarter which was basically unchanged from year-ago levels.

Of the states recording over-the-year unemployment rate declines, 12 had decreases of 1.0 percentage point or more (data not seasonally adjusted). The largest were in Idaho (-1.8), and in Texas, Utah, and Wyoming (-1.4 each). Seventeen states had unemployment rates below 4.0 percent. Vermont's rate of 1.9 percent was the lowest in the nation. Two states had rates exceeding 8.0 percent--Louisiana (9.7 percent) and West Virginia (8.5 percent).

FLORIDA'S RANK: When comparing Florida's unemployment rate with those of the nation's most populous states, Florida's rank was recorded as the fifth lowest in September. Massachusetts was the state with the lowest unemployment rate of 3.0 percent while Michigan registered the highest rate of 7.3 percent.

(P) - Preliminary Estimate

(1) - These series do not have a consistent seasonal pattern and consequently do not pass criteria for seasonal adjustment. Total nonagricultural employment is the sum of all major industries and is not adjusted. Durables and nondurables in manufacturing and wholesale and retail in trade may not add to total due to lack of adjustment to durables and wholesale.

(P) - Preliminary Estimate

(1) - These series do not have a consistent seasonal pattern and consequently do not pass criteria for seasonal adjustment. Total nonagricultural employment is the sum of all major industries and is not adjusted. Durables and nondurables in manufacturing and wholesale and retail in trade may not add to total due to lack of adjustment to durables and wholesale.

FLORIDA Employment Trends

Department of Labor and Employment Security
Bureau of Labor Market Information

Highlights:

- Nonagricultural employment grew by 4.0 percent or 198,500 new jobs over the year to reach 5,136,000 in October. Although Florida remained as the fastest growing of the populous states in terms of new jobs, it has recorded slower job growth throughout 1988.
- Services was by far Florida's fastest growing sector (6.0 percent over the year) and the sector gaining the highest number of new jobs (80,000 over the year). Most of this growth was recorded in the subsector of health and business services.
- Construction has regained jobs lost earlier in 1988 and was up in October by 2.6 percent or 9,100 new jobs to reach a high of 353,500.
- Transportation, communications, and public utilities was weaker than usual due to layoffs in air transportation.
- Florida's unemployment rate held steady at 4.9 percent in October representing 305,000 jobless. This was the fifth consecutive month with an unemployment rate below 5.0 percent. The national unemployment rate slightly higher at 5.3 percent. The gap between the national and Florida unemployment rates has narrowed in recent months.

* = Less than one-tenth of one percent.

(1) - These series do not have a consistent seasonal pattern and consequently do not pass criteria for seasonal adjustment. Total nonagricultural employment is the sum of all major industries and is not adjusted. Durables and nondurables in manufacturing and wholesale and retail in trade may not add to total due to lack of adjustment to durables and wholesale.

Employment Trends

Department of Labor and Employment Security
Bureau of Labor Market Information

Highlights:
- Nonagricultural employment increased by 3.9 percent or 192,500 new jobs over the year to reach 5,152,700 in November. Despite the fact that Florida's job growth rate has slowed during 1988, Florida remained as the fastest growing of the populous states in terms of new jobs.
- Services was Florida's largest and fastest growing industrial sector (up by 5.8 percent to 1,423,700 in November). Most of the new jobs were in the subsectors of health and business services.
- Manufacturing job growth has leveled off since August 1988, responding to foreign competition. It increased by 0.8 percent or 4,100 new jobs over the year.
- Construction employment continued to recover from previous job losses. It has been gaining employment since September 1988 and was up by 2.6 percent or 9,000 new jobs over the year.
- Florida's unemployment rate in November rose to 5.3 percent. The number of unemployed stood at 323,000 out of a labor force of 6,125,000. The national unemployment rate in November (5.4 percent) was only 0.1 percentage point higher than Florida's rate.

(1) - These series do not have a consistent seasonal pattern and consequently do not pass criteria for seasonal adjustment. Total nonagricultural employment is the sum of all major industries and is not adjusted. Durables and nondurables in manufacturing and wholesale and retail in trade may not add to total due to lack of adjustment to durables and wholesale.

(P) - Preliminary Estimate

(1) - These series do not have a consistent seasonal pattern and consequently do not pass criteria for seasonal adjustment. Total nonagricultural employment is the sum of all major industries and is not adjusted. Durables and nondurables in manufacturing and wholesale and retail in trade may not add to total due to lack of adjustment to durables and wholesale.

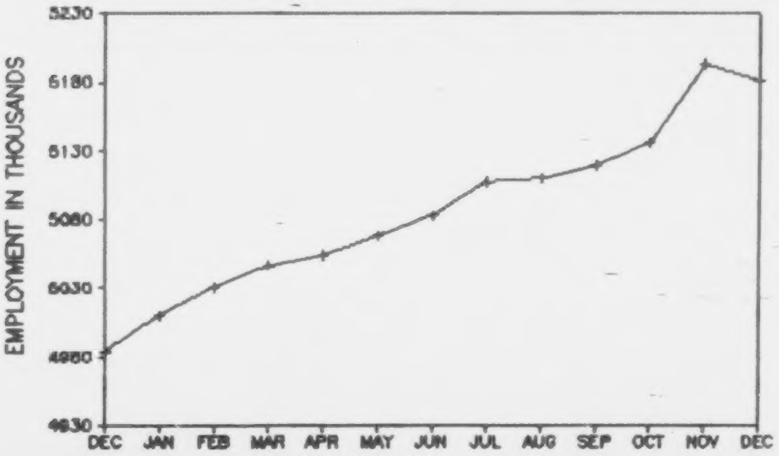
FLORIDA Employment Trends

Department of Labor and Employment Security
Bureau of Labor Market Information

Highlights:

- Florida's seasonally adjusted nonagricultural employment grew by 4.0 or 197,500 new jobs over the year to reach 5,181,300 in December. Growth has slowed during 1988 but Florida remains as the fastest growing of the populous states in terms of new jobs.
- Services employment has outdistanced all other sectors accounting for the highest employment level (1,433,700) and highest growth (80,100 new jobs over the year). Medical services and business services contributed the most to these gains.
- Mining employment has been experiencing a rebound due to strength in Florida's agricultural industry which uses phosphates in fertilizer. Employment increased by 500 jobs or 5.8 percent over the year.
- Florida's unemployment rate of 5.4 percent in December surpassed that of the nation (5.3 percent) for the first time since September 1981. In-migration of population and labor market new and re-entrants have had some impact on the unemployment rate.
- Local area unemployment statistics are included in this issue for the first time. Revised nonagricultural employment data for 1987 and 1988 will be provided in next month's issue.

FLORIDA'S NONAGRICULTURAL EMPLOYMENT
SEASONALLY ADJUSTED, DECEMBER 1987–DECEMBER 1988



Source: Florida Department of Labor and Employment Security, Bureau of Labor Market Information, Current Employment Statistics Program, in cooperation with the U.S. Department of Labor, Bureau of Labor Statistics.

Release Date: February 1989
Data Month: December 1988

Letter No. 472

HEALTHY BUT SLOWER JOB GROWTH: Total nonagricultural employment seasonally adjusted grew by 4.0 percent or 197,500 new jobs over the year to reach 5,181,300 in December. The pace of job growth has been slowing throughout 1988; previous annual job growth totals had been near 300,000 whereas we are now just under 200,000 new jobs on an annual basis. Revised nonagricultural employment statistics for 1988 and 1987 will be provided in next month's issue.

Those industrial sectors recording faster job growth than the statewide average over the year were services (5.9 percent), mining (5.8 percent), and trade (5.0 percent).

Those industries growing at a slower pace than that of the statewide average were government (3.1 percent); construction (2.9 percent); transportation, communications, and public utilities (1.9 percent); finance, insurance, and real estate (1.7 percent); and manufacturing (0.8 percent).

FLORIDA'S FASTEST GROWING SECTORS: The services industry is Florida's largest sector (1,433,700); the sector gaining the highest number of new jobs over the year (80,100); and the sector recording the fastest job growth rate over the year (5.9 percent). Almost half of services' gain in employment was in the subsectors of health services and business services. These two subsectors employ numerous professional occupations contrary to many reports of "services jobs". As can be seen on the services graph, employment has been steadily rising over the last twelve months.

Mining employment levels have been erratic during the last year but this sector is experiencing a rebound. Mining is Florida's smallest sector (9,100) so a gain of only 500 jobs (which is very large for mining) is equivalent to a 5.8 percent growth rate over the year. The recent growth in this sector can be partially attributed to strength in Florida's agricultural industry which uses phosphate in fertilizer production.

Trade is Florida's second largest industry (1,420,200) and it recorded a healthy growth rate of 5.0 percent or 67,800 new jobs over the year. The subsectors contributing the most to the gain in jobs were eating and drinking places; food stores; and general merchandise stores.

OTHER INDUSTRIES: The government sector grew by 3.1 percent or 23,500 new jobs over the year to reach 777,000 in December. As can be seen on the government graph, employment has been relatively flat over most of 1988 except for November. The strong peak in employment was the result of hiring temporary poll workers for the election. Most of the new jobs in this industry have been in the local government education subsector responding to population growth.

Construction employment has been surprisingly strong since October 1988 despite higher interest rates. Prior to October, employment levels had been virtually flat. In December construction increased by 2.9 percent or 10,200 new jobs to reach 358,400. Part of this increase could be attributed to home buyers expecting higher interest rates and trying to lock in on mortgage rates before they rise to higher levels.

Transportation, communications, and public utilities employment had been flat during 1988 until September 1988 when it started to show improvement. In December employment increased by 1.9 percent or 5,000 new jobs over the year. This sector had responded to transportation layoffs, and deregulation of communications causing consolidations and company transfers. Also technology improvements contributed to slower job growth in communications and public utilities. The strongest subsector in this industry is trucking and warehousing. Job losses have been recorded for air and water transportation and communications.

Finance, insurance, and real estate has recorded a rather uneven growth path during 1988, but has exhibited improved growth over the last two months. Employment gained by 1.7 percent or 6,300 new jobs over the year. Most of the growth in this industry was recorded in the subsectors of real estate agencies and insurance carriers. Job losses have been exhibited in banking and credit agencies, responding to deregulation, mergers, and consolidations and to industry competitive pressures.

Manufacturing was Florida's slowest growing industry in December with a gain of 0.8 percent or 4,100 new jobs over the year to reach 541,100. (Preliminary results from the annual benchmark revision show upward revision in the factory sector). Growth patterns have been somewhat erratic during 1988 with the last three months of the year exhibiting stagnation. Printing and publishing is by far the strongest growth subsector in manufacturing. Other healthy subsectors are machinery, instruments, and apparel/textiles. Job losses have been exhibited for lumber/wood products and transportation equipment.

FLORIDA AND THE OTHER STATES: Of the nation's eleven most populous states, Florida remained as the fastest growing (4.0 percent) in terms of new jobs over the year. California recorded the second fastest job growth rate of 3.5 percent, with North Carolina coming in third with a gain of 2.8 percent. When comparing the number of new jobs gained over the year, Florida was second (199,400) to California (418,400), with New York coming in third place (154,400).

When all the states in the nation were compared, the largest percentage job gains occurred in Nevada (5.9 percent), Oregon (4.9 percent), Washington (4.8 percent), and Virginia (4.6 percent). Eight states recorded employment gains of over 100,000, lead by California and Florida.

All but one state reported over-the-year job gains in services. About one-fourth of the states recorded job losses in transportation and public utilities and about one-third of the states recorded job losses in manufacturing and finance, insurance, and real estate.

FLORIDA'S UNEMPLOYMENT RATE SURPASSED THAT OF THE NATION: Florida's seasonally adjusted unemployment rate reached 5.4 percent in December 1988 surpassing that of the nation (5.3 percent) for the first time since September 1981. The number of jobless in Florida was 330,000 out of a labor force of 6,085,000. The range of unemployment rates over the last twelve months was from a low of 4.6 percent in July 1988 to a high of 5.4 in December 1988. The average annual unemployment rate for 1988 was 5.0 percent. Florida's unemployment rate has been on an uptrend over the last few months but at the same time Florida's job growth rate was the fastest of the populous states. Strong job markets can and do encourage in-migration to the state as well as encouraging residents to be new and re-entrants into the labor market.

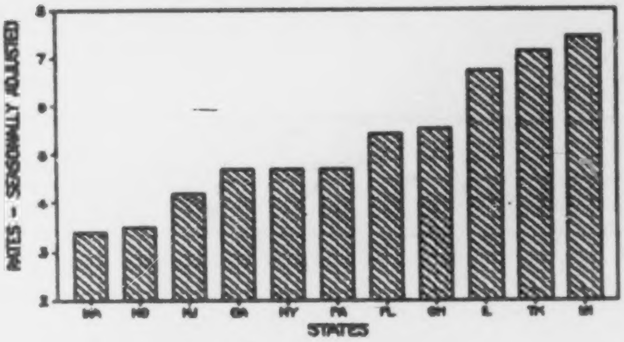
Source: U.S. Department of Labor, Bureau of Labor Statistics, Current Population Survey.

NATIONAL UNEMPLOYMENT RATES: The civilian unemployment rate for the nation was 5.3 percent in December, down about half a percentage point from a year ago. After declining early in 1988, the civilian worker unemployment rate stabilized around 5.5 percent for much of the year before edging down to 5.3 percent at yearend. In December 1.5 million persons had been looking for work for 15 weeks or more; this was nearly 300,000 fewer than a year earlier, accounting for 70.0 percent of the overall drop in unemployment. This is now the seventh year of sustained improvement in the labor market, continuing the longest peacetime expansion in the post-World War II era.

FLORIDA'S RANK: Compared to the nation's eleven most populous states, Florida recorded the seventh lowest seasonally adjusted unemployment rate (5.4 percent) in December. Massachusetts and North Carolina recorded the lowest unemployment rates of 3.4 percent and 3.5 percent, respectively. States with the highest unemployment rates were Texas (7.1 percent) and Michigan (7.4 percent).

UNEMPLOYMENT RATES — 11 POPULOUS STATES

DECEMBER 1987—DECEMBER 1988



Unemployment Rates* Seasonally Adjusted
Eleven Most Populous States, December 1988

State	Rate	State	Rate

FLORIDA Employment Trends

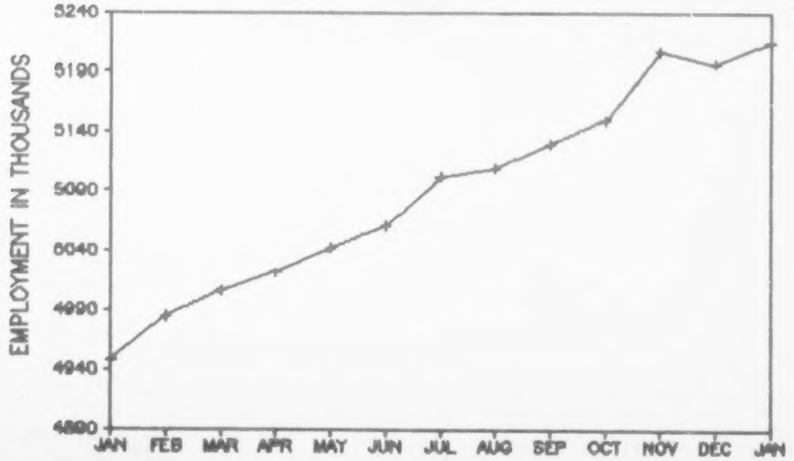
Department of Labor and Employment Security
Bureau of Labor Market Information

Highlights:

- Nonagricultural employment in Florida grew by 5.4 percent or 267,000 new jobs over the year to reach 5,215,800 in January. This was a considerably stronger annual job growth rate than that reported last month.
- Revised employment estimates for 1987 and 1988 are included in this issue. They show annual job growth rates of 5.4 percent for 1987 and a slower 4.8 percent for 1988.
- Florida remained as the fastest growing populous state in terms of new jobs over the year. Florida's annual job growth of 5.4 percent pulled farther ahead of California, the second fastest growing state, with its rate of 3.6 percent.
- Services lead in state employment growth expanding by 8.5 percent or 113,500 new jobs over the year. This sector alone accounted for just under half of all new jobs in the state.
- Florida's seasonally adjusted unemployment rate rose to 5.9 percent in January representing 362,000 jobless out of a labor force of 6,155,000. This was Florida's highest unemployment rate since September 1986 when the rate was 6.1 percent. Some of this gain in joblessness was due to new and re-entrants in the labor market and migration of jobseekers to Florida.
- Corrected job services data for November and December 1988 are included in this issue.

FLORIDA'S NONAGRICULTURAL EMPLOYMENT

SEASONALLY ADJUSTED, JANUARY 1988–JANUARY 1989



Source: Florida Department of Labor and Employment Security, Bureau of Labor Market Information, Current Employment Statistics Program, in cooperation with the U.S. Department of Labor, Bureau of Labor Statistics.

Release Date: March 1989
Data Month: January 1989

Letter No. 473

BENCHMARKING--THE ANNUAL REVISIONS: Estimates of nonagricultural wage and salary employment which appear in this publication each month are based on a survey of employers who participate on a voluntary basis. We would like to take this opportunity to thank those employers.

Nonagricultural wage and salary employment estimates are revised at the beginning of each year to incorporate new information gathered from employer reports on employment and wages submitted in conjunction with Florida's Unemployment Compensation (UC) Law. When the information on those employees becomes available, it is possible to get a fairly accurate estimate of the number of jobs in each area of the state. Results from UC records are supplemented by a survey of those employers not covered by this law in order to give a more complete estimate. The process of incorporating these new data is called "benchmarking". In the same way that a benchmark is used as a reference point in land surveying, the employment benchmarks serve as a beginning place from which changes in sample employment can be used to estimate the number of nonfarm jobs in the months following the "benchmark". The new benchmark month is March 1988.

Estimates of nonagricultural wage and salary employment are a major input to the total employment component of the labor force estimating procedure for sub-state areas. When the nonfarm employment estimates are revised, the labor force estimates are also revised for the local areas in Florida. There are two reasons for this: to incorporate the best available data and to have continuity between the two data series.

Because the principal purpose of the labor force data is for use in federal funding allocations, it is important that the labor force estimates be comparable from area to area and from state to state. In attempting to standardize the labor force estimating procedure, the Bureau of Labor Statistics requires all states to adjust their area estimates to the results of the Current Population Survey (CPS), a monthly survey of about 59,500 households nationwide. It is through this survey that the monthly national labor force estimates are derived and the monthly estimates for the eleven largest states, including Florida.

In all Labor Market Trends, current month, month ago, and year ago data are presented in the Labor Force Summary table for (1) civilian labor force, (2) total employment, (3) total unemployment, and (4) unemployment rate. Only the statewide statistics are seasonally adjusted. The area data are not seasonally adjusted and are prepared for the administration of various economic assistance programs.

Any questions relating to annual revisions should be directed to the Bureau of Labor Market Information at 904/488-1048.

FLORIDA DEPARTMENT OF LABOR AND EMPLOYMENT SECURITY • BUREAU OF LABOR MARKET INFORMATION

Highlights:

- Nonagricultural employment grew by 4.8 percent or 239,800 new jobs over the year to reach 5,224,600 in February. This is a healthy growth rate for Florida despite the fact that it is slower than January's annual rate (5.4 percent).
- Mining, Florida's smallest sector, was the fastest growing industry in February with a gain of 7.9 percent (or 700 jobs) over the year. The mining sector has been experiencing a comeback in recent months responding to improved phosphate markets.
- Services, one of Florida's largest sectors, gained the highest number of new jobs over the year (+99,200 or 7.3 percent) responding to strength in business and health services.
- MSA gaining the highest number of new jobs over the year was Miami-Hialeah (29,000) reflecting economic improvements in the area. Ft. Myers-Cape Coral was the fastest growing in terms of new jobs (9.0 percent).
- Florida's unemployment rate dropped to 5.3 percent representing 324,00 jobless Floridians in February. This was the second consecutive month reflecting a higher unemployment rate in Florida (5.3 percent) than that of the nation (5.1 percent).

FLORIDA'S NONAGRICULTURAL EMPLOYMENT

SEASONALLY ADJUSTED, FEBRUARY 1988–FEBRUARY 1989

(1) - These series do not have a consistent seasonal pattern and consequently do not pass criteria for seasonal adjustment. Total nonagricultural employment is the sum of all major industries and is not adjusted. Durables and nondurables in manufacturing and wholesale and retail in trade may not add to total due to lack of adjustment to durables and wholesale.

FLORIDA LABOR MARKET TRENDS

FLORIDA DEPARTMENT OF LABOR AND EMPLOYMENT SECURITY • BUREAU OF LABOR MARKET INFORMATION

Highlights:

- Nonagricultural employment in Florida grew by 4.2 percent or 211,500 new jobs over the year to reach a total of 5,217,900 in March. This growth is down from the 1988 annual average job growth rate of 4.8 percent.
- Florida remained as the fastest growing (4.2 percent) populous state in terms of new jobs. California was second at 3.2 percent over the year.
- Services was Florida's leading industry in March growing by 7.2 percent or 96,200 new jobs over the year. Most of the growth was in business and health services responding to gains in commercial activity, population, and personal income.
- Three industries in the Florida economy recorded job losses. These were construction, due to higher interest rates; air transportation, due to union strike activity; and finance, due to deregulation and competitive conditions.
- Florida's unemployment rate dropped to 4.8 percent in March; slightly below the national rate of 5.0 percent. Labor force statistics by race, sex, and age for 1988 are included in this issue.

FLORIDA'S NONAGRICULTURAL EMPLOYMENT

SEASONALLY ADJUSTED, MARCH 1988-MARCH 1989

JOB GROWTH HEALTHY BUT SLOWING: Florida's seasonally adjusted nonagricultural employment grew by 4.2 percent or 211,500 new jobs over the year to reach 5,217,900 in March. This is considered a healthy growth rate in new job creation but it is a slower pace than that recorded in January and February of this year and that of last year. The 1988 annual average job growth rate was 4.8 percent. As can be seen on the graph on page one, job growth continued at a steady pace during 1988 but flattened some over the last several months. All industry sectors in the State of Florida increased their employment totals on an annual basis, except for transportation, communications, and public utilities. On a monthly basis total nonagricultural employment declined slightly reflecting losses in mining; construction; transportation, communications, and public utilities; and government.

Those industries in the State of Florida gaining jobs at pace faster than that of the statewide average (4.2 percent) in March were services (7.2 percent), mining (5.6 percent), trade (5.2 percent), and government (4.4 percent).

Industries in Florida growing at a slower pace than the statewide average were finance, insurance, and real estate (2.2 percent); manufacturing (0.9 percent); construction (0.5 percent); and transportation, communications, and public utilities (-2.2 percent).

FLORIDA'S GROWTH INDUSTRIES: Services remained as Floridas largest industrial sector in March (1,463,000) and as the industry gaining the highest number of new jobs over the year (98,200). It also recorded the fastest job growth rate of 7.2 percent over the year compared to the statewide average of 4.2 percent in March. Services accounts for 28.0 percent of total nonfarm jobs in Florida and 46.0 percent of new job growth in the state. Most of the additional employment was in the subsectors of business services and health services; these two combined accounted for just under 50.0 percent of the total job growth in services. Growth in services responds to general gains in commercial activity and population (specifically retirees) and gains in personal income.

Mining is Florida's smallest industrial sector (9,500) which is why a gain of 500 new jobs over the year can reflect a rapid growth rate of 5.6 percent. Except for a small employment decline over the last month, mining has been experiencing a recovery since August 1988, as can be seen on the mining graph. Phosphate markets have improved both domestically due to strength in agriculture and internationally. Mining accounts for 0.2 percent of total nonfarm jobs in the state and also 0.2 percent of new jobs in Florida.

Trade is Florida's second largest industrial sector (1,431,300) and the sector gaining the second highest number of new jobs over the year (70,500). Its growth rate was 5.2 percent in March on an annual basis. Trade accounts for 27.0 percent of total nonfarm jobs in Florida and 33.0 percent of new job creation in the state. Most of the new employment in trade was from the sector of eating and drinking places (24.0 percent). This sector responds to general population and income growth and tourism activity in Florida.

Government employment grew by 4.4 percent or 33,700 new jobs over the year to reach 795,000 in March. Government accounts for 15.0 percent of total nonfarm employment in Florida and 16.0 percent of new job creation in the state. As the government graph shows, government employment has been on a steady rise over the last 12 months except for November 1988 when there was a substantial gain in temporary hiring for election poll workers. Seventy percent of new government employment has been in the local government subsector with most of it being related to education.

FLORIDA'S REMAINING INDUSTRIES: Finance, insurance, and real estate grew by 2.2 percent or 8,000 new jobs over the year to reach 371,700 in March. This industry has been growing at a slower pace for some time now due to financial deregulation, mergers, and acquisitions. Job losses have been recorded for banking and credit agencies, whereas strong growth has been recorded for insurance carriers. Finance, insurance, and real estate accounts for 7.0 percent of total nonfarm employment and 4.0 percent of job creation in the state.

Manufacturing employment has been somewhat erratic over the last twelve months, partially due to federal contract scheduling in aerospace and defense. It grew by 0.9 percent or 4,700 new jobs over the year to reach 544,200 in March. Manufacturing job growth averages about 1.0 percent per year in Florida so growth appears normal based on historical standards. Florida is at an all-time high in manufacturing jobs whereas the nation has yet to surpass the 1979 peak in factory jobs. Electrical and electronic equipment gained the highest number of new jobs within the manufacturing sector followed by printing and publishing. These two subsectors accounted for over 90.0 percent of job growth in manufacturing. Total manufacturing accounts for 10.0 percent of total nonfarm employment in the state and 2.0 percent of new job creation in Florida. According to Dun and Bradsteet, Florida lead the nation in number of new business incorporations in 1988.

Construction grew by 0.5 percent or 1,600 new jobs over the year to reach 349,700 in March. This is a relatively slow growth rate for construction as it has responded to higher interest rates and overbuilding around the state. Just since January 1989, Florida has lost 7,000 construction jobs. Also related to this drop is a cutback in road construction responding to budgetary shortfalls. Construction employment accounts for 6.7 percent of total nonfarm jobs in Florida and less than 1.0 percent of new job creation in the state.

Transportation, communications, and public utilities has experienced a negative growth rate over the year of -2.2 percent or -5,700 jobs. The loss in jobs was in response to a decline of -10,200 in air transportation employment due to union strike activity. Growth has been strongest in this industry in the trucking and warehousing subsector. The loss of air transportation employment in the state will have multiplied effects on the Florida economy due to declines in support businesses and declines in income and consumption of former workers.

FLORIDA AND THE OTHER STATES: Of the eleven most populous states, Florida (4.2 percent) remained as the fastest growing in terms of new job creation over the year. California was second (3.2 percent) and Ohio was third (2.6 percent). When comparing the absolute number of new jobs created, Florida (+214,300) was second to California (+379,800), with Texas coming in third (+133,600). Despite slower job growth in the State of Florida, the state's growth ranking on a comparative basis has remained unchanged.

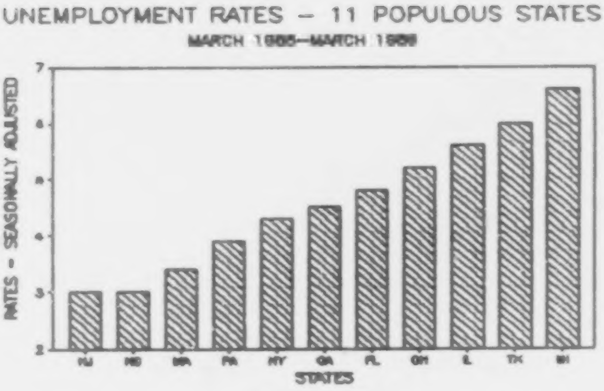
NONAGRICULTURAL EMPLOYMENT GROWTH RATES
ELEVEN MOST POPULOUS STATES, MARCH 1988–MARCH 1989

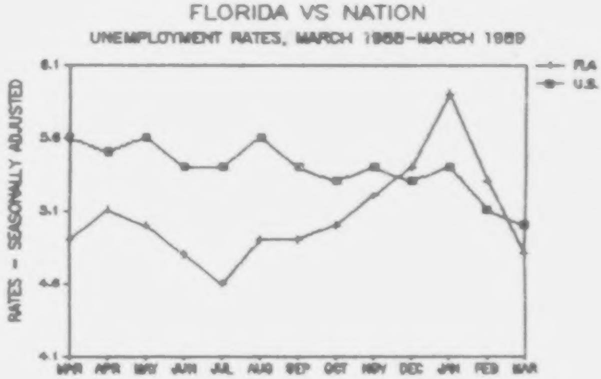
Source: Florida Department of Labor and Employment Security, Bureau of Labor Market Information, Current Employment Statistics Program, in cooperation with the U.S. Department of Labor, Bureau of Labor Statistics.

When comparing all the states in the nation, only the smaller states of Nevada (7.2 percent), Washington (5.0 percent), and Virginia (4.3 percent) grew at a faster pace than Florida. Nevada has consistently led all states in annual percentage job growth for 2 1/2 years. Over the last year, nonfarm employment rose by 2.0 percent or more in 29 states and the District of Columbia. Every state reported over-the-year job gains in services and trade. Over three-fourths of the states had increases in manufacturing; transportation and public utilities; finance, insurance, and real estate; and in government.



Source: U.S. Department of Labor, Bureau of Labor Statistics, Current Population Survey.

FLORIDA'S UNEMPLOYMENT RATE DROPPED BACK BELOW THE NATIONAL RATE IN MARCH: Florida's seasonally adjusted unemployment rate dropped to 4.8 percent representing 299,000 jobless out of a labor force of 6,179,000 in March. The national unemployment rate stood slightly higher at 5.0 percent in March. The change in the Florida unemployment rate was not statistically significant over the month or year. The unemployment rate had been on an upward trend from August 1988 until January 1989, but has declined for two consecutive months since then. In December, January, and February, Florida's unemployment rate surpassed that of the nation for the first time since September 1981. The range of unemployment rates over the last 12 months was from a low of 4.6 percent in July 1988 to a high of 5.9 percent in January 1989. The average unemployment rate for the 12-month period was 5.1 percent, compared to 5.0 percent in 1988 and 5.3 percent in 1987. The national unemployment rate was 5.5 percent in 1988, down from 6.2 percent the previous year.



Source: U.S. Department of Labor, Bureau of Labor Statistics, Current Population Survey.

FLORIDA'S RANK: Of the nation's 11 most populous states, Florida's unemployment rate (4.8 percent) was the 7th lowest in March. New Jersey and North Carolina recorded the lowest rates of 3.0 percent while Texas (6.0 percent) and Michigan recorded the highest rates (6.6 percent).

Unemployment Rates* Seasonally Adjusted
Eleven Most Populous States, March 1989

State	Rate	State	Rate
New Jersey	3.0	Florida	4.8
North Carolina	3.0	Ohio	5.2
Massachusetts	3.4	Illinois	5.6
Pennsylvania	3.9	Texas	6.0
New York	4.3	Michigan	6.6
California	4.5		

*Ranked in magnitude from lowest to highest.

FLORIDA UNEMPLOYMENT STATISTICS BY RACE, SEX, AND AGE. Annual average Florida labor force statistics for 1988 were recently released by the U.S. Department of Labor. In Florida, the unemployment rates for men and women declined over the year. The unemployment rate for men declined from 5.0 percent in 1987 to 4.5 percent in 1988 and for women from 5.8 percent to 5.6 percent. The teenage rate also decreased, from 16.1 percent to 14.0 percent.

Unemployment by race varied widely in Florida, averaging 4.2 percent for whites, 9.0 percent for blacks, and 5.6 percent for Hispanics. Within racial groups, unemployment for men was lower in all groups than that for women. White teenagers had a lower unemployment rate than other groups--11.2 percent--compared to 13.9 percent for Hispanic youth and 27.0 percent for black teenagers.

Unemployment rates for most groups of workers were lower in Florida than the national averages. The rate for men in Florida was 4.5 percent, compared to 5.5 percent for the Nation. Female unemployment, at 5.6 percent, was the same as the national rate. White unemployment stood at 4.2 percent for Florida and 4.7 percent nationally, while black unemployment at 9.0 percent was lower than the U.S. rate of 11.7 percent. Florida's teenage rate was 14.0 percent compared to the national rate of 15.3 percent.

Florida's 1988 annual average unemployment rate of 5.0 percent was 28th highest of the 50 states and the District of Columbia and was 0.5 percentage point below the U.S. rate of 5.5 percent. State unemployment rates ranged from a high of 10.9 percent of the labor force in Louisiana to low of 2.4 percent in New Hampshire. Rates in the Southeast varied from a low of 3.6 percent in North Carolina to a high of 8.4 percent in Mississippi.

FLORIDA LABOR MARKET TRENDS

FLORIDA DEPARTMENT OF LABOR AND EMPLOYMENT SECURITY • BUREAU OF LABOR MARKET INFORMATION

Highlights:

- Nonagricultural employment grew by 4.3 percent or 216,400 new jobs over the year to reach 5,239,100 in April. Annual growth rates had been declining during 1989 but April's rate showed some improvement.
- Florida maintained its lead as the populous state with the fastest job growth rate (4.3 percent) followed by California (3.0 percent). Florida gained the second highest number of new jobs over the year compared to the nation's 50 states (behind only California).
- Services remained as Florida's strongest sector with employment gains of 91,500 or 6.7 percent.
- Transportation, communications, and public utilities was the only industry to record job losses of -4,700 or -1.8 percent over the year. Air transportation alone accounted for a loss of -9,100 over the year due to strike activity.
- April's unemployment rate rose to 5.2 percent with 323,000 jobless Floridians out of a labor force of 6,245,000. This was stable compared to the year-ago rate of 5.1 percent. Massachusetts recorded the lowest rate (3.8 percent) of the populous states and Texas the highest (7.4 percent).

% = Less than one-tenth of one percent.

(1) - These series do not have a consistent seasonal pattern and consequently do not pass criteria for seasonal adjustment. Total nonagricultural employment is the sum of all major industries and is not adjusted. Durables and nondurables in manufacturing and wholesale and retail in trade may not add to total due to lack of adjustment to durables and wholesale.

FLORIDA LABOR MARKET TRENDS

FLORIDA DEPARTMENT OF LABOR AND EMPLOYMENT SECURITY • BUREAU OF LABOR MARKET INFORMATION

Highlights:

- Nonagricultural employment after seasonal adjustment rose by 4.1 percent (+206,700 new jobs) over the year. Total nonfarm employment totaled 5,248,600 in May. This is a continuation of the slowing trend that started in January 1989.
- Services and trade, Florida's largest industries, accounted for almost 3 of 4 new jobs in the State of Florida.
- Both construction (-8,900 jobs since January) and air transportation (-8,900 over the year) have recorded major job losses. Now that interest rates are dropping there is hope of improvements in construction employment.
- Florida remained as the fastest growing populous state for new jobs and the state with the second highest absolute number of new jobs in the nation behind California.
- Florida's unemployment rate dropped to 6.1 percent of the labor force, compared to the national unemployment rate of 5.3 percent. May was the fifth month over the last year that Florida's unemployment rate was higher than that of the nation.

FLORIDA'S NONAGRICULTURAL EMPLOYMENT

SEASONALLY ADJUSTED, MAY 1988-MAY 1989

(1) - These series do not have a consistent seasonal pattern and consequently do not pass criteria for seasonal adjustment. Total nonagricultural employment is the sum of all major industries and is not adjusted. Durables and nondurables in manufacturing and wholesale and retail in trade may not add to total due to lack of adjustment to durables and wholesale.

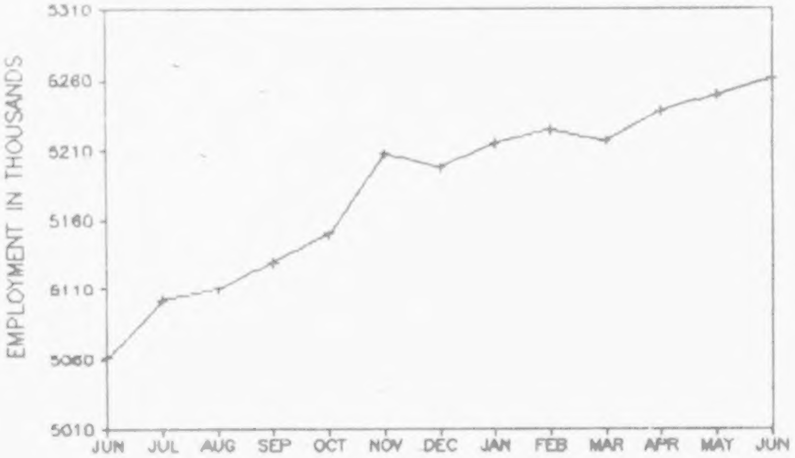
FLORIDA LABOR MARKET TRENDS

FLORIDA DEPARTMENT OF LABOR AND EMPLOYMENT SECURITY • BUREAU OF LABOR MARKET INFORMATION

Highlights:

- Florida's nonagricultural employment growth rate over the year (3.9 percent) remained as the fastest of the nation's eleven most populous states, followed by California at 2.7 percent. Florida gained the second highest number of new jobs in the nation behind only California.
- Florida's job growth has been slowing despite its strong standing on a comparative basis. Both transportation and construction have recorded negative job growth over the last year.
- Florida's services and trade sectors have remained strong contributing almost 3 of every 4 new jobs in the state.
- Florida's unemployment rate (6.1 percent) dropped in June but remained above the national rate (5.3 percent) for the second consecutive month. Slower job growth relative to population gains can account for some of the divergence.

FLORIDA'S NONAGRICULTURAL EMPLOYMENT
SEASONALLY ADJUSTED, JUNE 1988–JUNE 1989



Source: Florida Department of Labor and Employment Security, Bureau of Labor Market Information, Current Employment Statistics Program, in cooperation with the U.S. Department of Labor, Bureau of Labor Statistics.

Release Date: August 1989
Data Month: June 1989

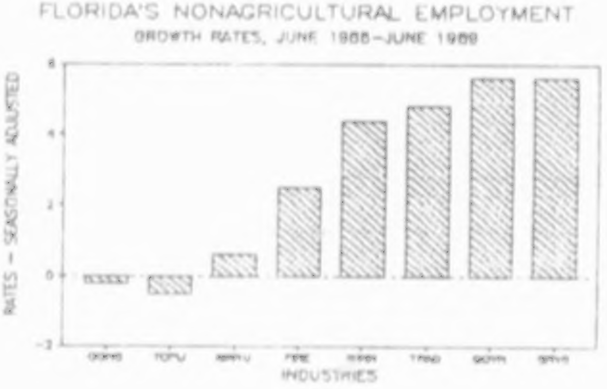
Letter No. 478

JOB GROWTH COMPARATIVELY STRONG BUT SLOWER ACCORDING TO STATE STANDARDS: Florida's seasonally adjusted nonagricultural employment in June grew by 3.9 percent or 199,200 new jobs over the year. Total nonagricultural employment reached a high of 5,260,400 in June. This growth rate is healthy compared to other states in the nation but it is considerably slower than Florida's previous growth rates during 1989. Annual growth rates for 1989 stood at 5.4 percent (January), 4.8 percent (February), 4.2 percent (March), 4.3 percent (April), 4.1 percent (May), and now 3.9 percent (June). The annual average growth rate in nonagricultural jobs for 1988 was 4.8 percent compared to the current 3.9 percent.

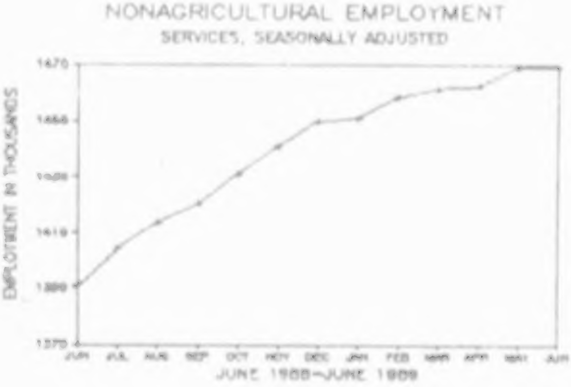
Out of Florida's eight major industrial divisions, six recorded positive job growth over the year. They were services (5.6 percent); government (5.6 percent); trade (4.8 percent); mining (4.4 percent); finance, insurance, and real estate (2.5 percent); and manufacturing (0.6 percent). The two industries recording job losses over the year were transportation, communications, and public utilities (-0.5 percent); and construction (-0.2 percent).

Those industrial divisions gaining jobs at a pace faster than the statewide average were services, government, trade, and mining. Those industries growing slower than the statewide average (3.9 percent) were finance, insurance, and real estate, manufacturing; transportation, communications, and public utilities; and construction.

FLORIDA'S GROWTH INDUSTRIES: Services remained as Florida's largest employment division (1,469,000) in June and it remained as the division gaining the highest number of new jobs over the year (+78,100) and it gained new jobs at the fastest rate (+5.6 percent). Services employment does account for almost 28.0 percent of total jobs with most of the growth being in the subsectors of health and business services. When looking at services' percentage of total new jobs statewide, services accounts for 39.2 percent--over 1/3 of total new jobs. Despite being Florida's lead industry, services employment growth has slowed this year.



Source: Florida Department of Labor and Employment Security, Bureau of Labor Market Information, Current Employment Statistics Program, in cooperation with the U.S. Department of Labor, Bureau of Labor Statistics.



Source: Florida Department of Labor and Employment Security, Bureau of Labor Market Information, Current Employment Statistics Program, in cooperation with the U.S. Department of Labor, Bureau of Labor Statistics.

Government job growth in June was tied with services at 5.6 percent over the year. Government employment has grown on a steady pace over the last 12 months. It gained 43,500 new jobs over the year with most of them being in local government/education to meet the demands of population growth. The peak employment month of November 1988 was the result of the hiring of election workers. Government employment accounts for about 16.0 percent of total nonfarm jobs while it accounts for almost 22.0 percent of new job growth in the state.

Trade remained as Florida's second largest industry (1,444,200) in June with a healthy growth rate of 4.8 percent or 66,800 new jobs over the year. Trade accounts for 27.5 percent of total employment or 33.5 percent of new job growth. Eating and drinking places employment was the subsector to gain the largest percentage (27.5 percent) of the new retail trade jobs.

FLORIDA'S SLOWER-GROWING INDUSTRIES: Finance, insurance, and real estate has improved in recent months although it is still slow on an annual basis (2.5 percent). It reached 375,000 total in June and gained 9,200 new jobs over the year.

This industry accounts for 7.1 percent of total jobs in the state and 4.6 percent of new job growth. The banking subsector appears to have recovered in recent months while the credit agencies subsector has still lost jobs over the year. This subsector includes savings and loans and credit unions. This industry has felt the effects of deregulation and competitive conditions.

Manufacturing employment grew by 0.6 percent or 3,300 new jobs over the year to reach 543,600 in June. It is one of Florida's most volatile sectors reacting to national and international markets. Areas of strength in manufacturing were printing and publishing and electrical and electronic equipment. Areas of weakness were the construction-related subsectors of lumber and wood products; and stone, clay, and glass; and also fabricated metals; machinery; food and kindred products; and allied chemicals. Manufacturing accounts for just over 10.0 percent of total jobs statewide while accounting for only 1.7 percent of statewide job growth.

Transportation, communications, and public utilities has lost jobs (down -0.5 percent a -1,300 jobs) over the year responding primarily to the airline strike. Air transportation dropped -7,300 jobs while water transportation lost 100 and railroad transportation dropped 400 over the year. This industry accounts for 4.9 percent of total nonfarm employment in the state while it did not account for any of the new jobs statewide. Some improvements have been showing in this sector over the last three months due to rehiring.

Construction employment dropped by -0.2 percent or -800 jobs over the year to reach 346,000. These losses are the result of interest rates and the correction in the market due to overbuilding in some parts of the state. Although interest rates did drop some this year they have leveled off and the employment numbers have yet to show any response. The losses are in the subsectors of special trade contracts and heavy construction contracting.

FLORIDA AND THE OTHER STATES: Despite Florida's slowing job market it has retained its lead as the populous state with the fastest annual job growth rate (3.9 percent). The state with the second fastest job growth rate was California at 2.7 percent. Massachusetts recorded the slowest growth rate in new jobs with a gain of 0.7 percent.

When all the states in the nation are compared, in absolute numbers, Florida gained the second highest number of new jobs of any state in the nation at 198,300. California was first with 331,800 new jobs. Massachusetts gained the least number of new jobs (22,500) of the eleven populous states.

FLORIDA'S UNEMPLOYMENT REMAINED HIGHER THAN THAT OF THE NATION: Although Florida's unemployment rate seasonally adjusted dropped to 6.1 percent in June it was still higher than the national rate of 5.3 percent. May's rate of 6.4 percent was the highest rate experienced in Florida since July 1985 when it was 6.5 percent. The unemployment rate in June a year ago (1988) stood at 4.8 percent. This is significantly lower than the current rate (6.1 percent). Florida's unemployment rate rose in both April and May until this drop in June. A possible reason for the higher jobless rate is that job growth is slowing relative to population growth. There were over-the-year increases in unemployment rates of 0.5 percentage point or more in the District of Columbia and 13 states. Vermont recorded the greatest increase (1.4 percentage points), followed by Florida and New York (both 1.3 percentage points).

FLORIDA LABOR MARKET TRENDS

FLORIDA DEPARTMENT OF LABOR AND EMPLOYMENT SECURITY • BUREAU OF LABOR MARKET INFORMATION

Highlights:

- Nonagricultural employment in Florida grew by 3.4 percent or 173,800 new jobs over the year to reach 5,276,300 in July. Employment growth has slowed statewide since January of this year when the annual growth rate was 5.4 percent.
- Mining is Florida's smallest sector but it did record the fastest job growth rate of 5.6 percent (or 500 new jobs) over the year. It has been responding to improved phosphate markets.
- Services employment remained as the sector gaining the highest number of new jobs (69,300) over the year due to gains in health and business services.
- Construction was the only major sector to lose employment over the year (-1.0 percent or -3,500). Since January the loss is 6,600 jobs.
- Florida's unemployment rate in July dropped to 5.7 percent representing 356,000 jobless out of a labor force of 6,286,000. Florida's unemployment rate remains above the national rate of 5.2 percent in July.

* = Less than one-tenth of one percent.

(1) - These series do not have a consistent seasonal pattern and consequently do not pass criteria for seasonal adjustment. Total nonagricultural employment is the sum of all major industries and is not adjusted. Durables and nondurables in manufacturing and wholesale and retail in trade may not add to total due to lack of adjustment to durables and wholesale.
